

ChiliProject - Bug # 821: Autologin does not work

Status:	Open	Priority:	Normal
Author:	Vladislav Poluhin	Category:	User accounts
Created:	2012-01-09	Assignee:	
Updated:	2012-06-14	Due date:	
Remote issue URL:			
Affected version:	2.6.0		
Description:	I have to be authorized each time I open the browser. Despite autologin checked at the authorization page.		

History

Currently, the autologin feature allows only one browser to autologin. If you use the feature on multiple browsers, it will fail when you switch browsers. Also, you need to preserve static cookies during browser restarts. Some browsers delete all cookies during restart which will defeat the autologin feature.

Could you please verify both points?

Oh, and as a test, could you try to comment the three autologin settings in your configuration.yml so it looks like this (notice the hash comments):

```
<pre>
# default configuration options for all environments
default:
  # [...]

  # autologin_cookie_name:
  # autologin_cookie_path:
  # autologin_cookie_secure:
</pre>
```

> Currently, the autologin feature allows only one browser to autologin. If you use the feature on multiple browsers, it will fail when you switch browsers.

```
# Open in browser http://dev.u-mind.ru
# Auth as demo:password with checked autologin
# Host set cookies:
## @(without name)@ expires in 2013 year
## @_chiliproject_session@ expires after Session
# Close browser
# Open browser again
# I'm at login page
```

Besides the same is with your host <https://www.chiliproject.org>

2012-01-19 03:54 pm - Vladislav Poluhin

This solves problem:

```
<pre>
default:
  autologin_cookie_name: "autologin"
</pre>
```

But there is a question: why this value is equal to "" in configuration on default?

2012-01-21 05:19 am - Vladislav Poluhin

Please make it impossible to use the empty cookie names at the code.

2012-04-11 08:24 am - Vladislav Poluhin

Bug still exists at 3.1.

Yes, it is.

The same issue with this site.
