

ChiliProject - Bug # 830: Repository does not tell how to clone it

Status:	Declined	Priority:	Normal
Author:	H Goebel	Category:	
Created:	2012-01-12	Assignee:	
Updated:	2012-01-12	Due date:	
Remote issue URL:			
Affected version:			
Description:	The .../repository page does not tell where to clone the repository.		
	I'm missing something like:		
	* Git Read-only <code>git://github.com/pyinstaller/preliminary.git</code>		
	* <code>git clone git://github.com/pyinstaller/preliminary.git</code>		
	as you can so on every github/gitorious/bitbucket summary page.

That's no information ChiliProject readily has. Any user-facing hosting of repositories is provided by plugins external to the ChiliProject core. So unless we include actual hosting facilities into the core, this is out-of-scope of ChiliProject for now.

However there is my "Redmine Checkout plugin": <http://dev.holgerjust.de/projects/redmine-checkout/wiki> (which works for all versions of ChiliProject) which allows you to configure and display these URLs.
