Hi,

I don't think is possible. Because Swift-Kanban

* is proprietary software (not opensource). Digit must develop a plugin to link with Chiliproject. Not the other way

* You can use plugin backlog to obtain a similar scope to Swift-Kanban

* Swift-Kanban use Limit WIP and differentes workflow issues statuses for each project. Chiliproject don't have issues statuses for each project is global issues statuses

Cheers

Yannick

Referenced Plugin: "ChiliProject BackLogs":https://github.com/finnlabs/chiliproject_backlogs

Chiliproject Backlog don't provide the ScrumBan, it's just a management visual, not a Kanban. Which provides little of interest (no limit by status, statuses per project, cumulative flow, etc.)
