

ChiliProject - Feature # 837: Design: Optimize the display of related revisions in Issues#show

Status:	Open	Priority:	Normal
Author:	Holger Just	Category:	Journals / History
Created:	2012-01-17	Assignee:	
Updated:	2012-01-24	Due date:	
Remote issue URL:			
Affected version:	3.0.0		
Description:	Extracted from #807 (by Eric Davis)		
<p>Holger Just wrote:</p> <p>> What would actually be the coolest would be if the revisions were displayed interleaved with the other journal entries (sorted by time), maybe with a slightly different formatting or an icon or something.</p> <p>></p> <p>> If then there was a simple way to filter the displayed journal entries by type (could be "normal" and "revisions" for now, but could be expanded to, say, changed columns or users, or ...) it could be really useful to follow the track of the issue. Esp. if it's a longer one where several attempts to fix are required. It would also make the workflow of updating issues via commit log much clearer.</p> <p>The only problem with that is you'd have to scan the entire history to look for revisions, which would make it easy to miss one. Perhaps...</p> <ul style="list-style-type: none">* Have the list of revisions on top like the related issues* Have each revision inline in the history like you mentioned* On each revision on the top, anchor link to the revision in the history (e.g. click commit X -> jumps down to journal 42)			

Associated revisions

2008-03-16 03:18 pm - Jean-Philippe Lang

Adds a title attribute to the next/previous links on the activity view, containing the corresponding date range (#837).
