ChiliProject - Feature # 855: Allow subtasks to be assigned on sub projects

Status:	Open	**Priority:**	Normal
Author:	Daniel Nauck	**Category:**	Issue tracking
Created:	2012-02-01	**Assignee:**	
Updated:	2012-03-02	**Due date:**	
Remote issue URL:	http://www.redmine.org/issues/5487		
Affected version:	3.0.0		
Description:	Currently it's not possible to create a subtask on a sub project.		
	It would be very helpful to have issues/tasks in a subproject with a parent in the root project.

- Remote issue URL set to http://www.redmine.org/issues/5487

See also http://www.redmine.org/issues/5487 for some discussion of this feature.

2012-03-02 03:19 pm - Daniele Segato

If you try to set as parent task an issue from another project (or from the parent project) you get:

> _Parent task doesn't belong to the same project_

I also vote for this issue.

Typical need:

you have a project splitted into module

you need to fix a bug / implement a feature that interest more then one module

you'd like to create the _parent_ issue on the main project

then create sub-tasks in the sub-project modules

This, combined with inherited permissions for parent --> children projects would be a very good improvement
