ChiliProject - Bug # 858: can't close issue list if list contains parent/sub-issue or blocking relationships

Status:	Open	**Priority:**	Normal
Author:	Daniele Segato	**Category:**	User interface
Created:	2012-02-02	**Assignee:**	
Updated:	2012-02-02	**Due date:**	

Remote issue URL:	
Affected version:	
Description:	Step to reproduce:

1. Create an issue
2. Create a sub issue, or another issue adding the relationship "blocking ..." on the issue created at step 1.
3. go to issue list and select this 2 issues (and others if you have)
4. right click and try to change status to "closed"

you can't even if you are closing bot the child-blocking issue

this is really annoying when you want to close a list of many issues and you have some in there with this kind of relationship, you need to close one issue at the time (more or less).

I think that if you are choosing multiple issues and both the blocked and the blocking issue are selected I should be able to send the issue to a close status.

As an alternative it would be nice to "see" the issue that are beeing blocked by another (a little icon or something) - this could be helpful even if you don't have to close the issue.
