Any ideas or thoughts? I have my plugin that sends an exception email but we can also use the Hoptoad server plugin and report errors to a ChiliProject instance.

2011-01-29 10:42 pm - Felix Schäfer

I don't know how much setup each one requires, but I'd go with the email-sending one (probably easier) to the infrastructure team (?), we can still switch to something "more" if the need arises.
