ChiliProject - Feature # 885: show the version number somewhere

Status:	Closed	**Priority:**	Normal
Author:	Ruben Willems	**Category:**	
Created:	2012-02-14	**Assignee:**	
Updated:	2012-02-14	**Due date:**	

Remote issue URL:	
Affected version:	
Description:	I can not find anywhere what version of chiliproject a site is. From browsing to the site. Looking at the filesystem, it is possible of course.

it would be great to see a version number, for example at the bottom of the page where you have the link to the chili project page.

If you have admin rights on a site, you can determine the full version by going to /admin/info

Additionally, the question mark at the top menu links to the relevant major version number. For example, the link above points to /help/v3

Hopefully this is sufficient for your use case. For security reasons, it may not be desirable to show the full version string by default.

- Status changed from Open to Closed

perfect solution :-)

2012-02-14 10:04 pm - Holger Just

Just for reference: #101 and #558 regarding the help-link contents and http://www.redmine.org/issues/794 for the reasons why the version info was removed from the footer.
