Would it be enough to have a gmail address that's polled every 3-5 minutes? If so, do we already have an address for it

(@chiliproject@chiliproject.org@?)? I'd be willing to configure it on the server, Eric would have to throw it in moonshine if it can take care of cron jobs though.

2011-02-19 01:36 am - Eric Davis

We already have it all setup but there was a bug in the @MailHandler@ that kept resetting fields on every email (would change Tracker to Bug). Once we get closer to 1.1.0 I'm planning to redeploy <https://www.chiliproject.org> using the official repo and enable incoming email then.
