

ChiliProject - Bug # 907: long title of the chiliproject's site

Status:	Duplicate	Priority:	Normal
Author:	Johan Pustoch	Category:	Themes
Created:	2012-02-27	Assignee:	
Updated:	2012-02-27	Due date:	
Remote issue URL:			
Affected version:			
Description:	In version 3.0, width default theme, if the title of the chiliproject's site is longer than 200px, it overflows below. I corrected it on my site by changing the rule of #logo (in application.css) > @width:auto;@ instead of : > @width: 200px;@ or perhaps better : * a greater width (350px ?) * use mediaqueries ? Thank you to the chiliproject's team for this tool (and for this new theme !). It help us to work together :-)

- Description changed from

In version 3.0, width default theme, if the title of the chiliproject's site is longer than 200px, it overflows below.

I corrected it on my site by changing the rule of #logo (in application.css)

> @width:auto;@

instead of :

> @width: 200px;@

or perhaps better :

** a greater width (350px ?)*

** use mediaqueries ?*

Thank you to the chiliproject's team for this tool (and for this new theme !). It help us to work together :-) to *In version 3.0, width default theme, if the title of the chiliproject's site is longer than 200px, it overflows below.*

I corrected it on my site by changing the rule of #logo (in application.css)

> @width:auto;@

instead of :

** use mediaqueries ?*

Thank you to the chiliproject's team for this tool (and for this new theme !). It help us to work together :-)

- Status changed from Open to Duplicate

Duplicate of #804.

A `@width: auto@` doesn't really help as it then overflows in other strange ways if the browser window becomes too narrow. Please see #804 for some additional discussion of the topic.
