Remote issue URL:	
Affected version:	
Description:	Hello,
	if a define a filter, save it and chosse the option Current project and its subprojects the custom query will not show up at any subproject.
	Am i doing something wrong, or is that a bug.
	Thanks in advance
	Kind regards
	Kurt

Hi,

sorry my mistake, i thought that the "project and its subprojects" option means
that the filter is included within every subproject (and therefore appears at the
sidebar below my custom queries).

Sorry :-)

Kind regards

Kurt

The option does something different from what you think it does. As such, it is not a bug at all.

In fact, that option selects which issues you want to see in your query result: only issues from your current project or issues from your current project

and all its subprojects.

The option does *not* select in which projects the saved query is going to be visible. Here we still have only two options: in the current project or for every project (if you created the query on @/issues@).
