Description:	Hi, I recently migrated our Redmine to Chili. Thanks - I like it. I also work with Drupal 7 which has a <i>*useful and productive*</i> feature called "Shortcuts": http://drupal.org/documentation/modules/shortcut . The Shortcut toolbar is positioned at the top of the page to which you can quickly add links. This is useful for creating global links to commonly-used pages within a site. I think this would improve usability and increase productivity of Chili and give users that extra bit of <i>*safe and easy customization*</i> that would smooth <i>*user experience*</i> with Chili. It would benefit users and developers. All the best, Guy
