

ChiliProject - Feature # 915: default bundle install installs old pg version

Status:	Closed	Priority:	Normal
Author:	Dies Koper	Category:	Libraries
Created:	2012-03-01	Assignee:	Felix Schäfer
Updated:	2012-03-01	Due date:	
Remote issue URL:			
Affected version:	3.0.0		
Description:	The following command installs an old pg version: bundle install --without=test sqlite mysql2 mysql openid rmagick This is due to Gemfile having "~> 0.9.0" (i.e. 0.9.x). pg is up to 0.13.x now. I've run the cp tests on 0.13.1 with no failures. Please consider updating the pg version. Felix noted the reason 0.9.0 was picked was "because it was the last version to support ruby 1.8.6": https://www.chiliproject.org/boards/1/topics/1188?r=1226#message-1226 . <pre> diff --git a/Gemfile b/Gemfile index 6ec56e2..0ef4d19 100644 --- a/Gemfile +++ b/Gemfile @@ -57,7 +57,7 @@ platforms :mri, :mingw do end group :postgres do - gem "pg", "~> 0.9.0" + gem "pg" # gem "postgres-pr" end end </pre>

Don't require a specific pg gem version #915

pg was locked to ~> 0.9.0 as it was the last version to support ruby 1.8.6, we don't support it officially anymore, thus we can remove the version requirement.

Looks good to me and some quick testing didn't show anything askew. Committed in commit:900eda7, I'll close here when the CI has churned through it once. Thanks!

- *Status changed from Ready for review to Closed*

The CI is good.
