<b>Affected version:</b>			
<b>Description:</b> Please see the following jQuery plugin DEMO from Adam Shaw: <a href="http://arshaw.com/fullcalendar/">http://arshaw.com/fullcalendar/</a>  It makes it easy to *move* issues to new dates. It is much quicker than going into an issue and then re-assigning it. It also helps when various sub-tasks have are offset against a parent task which means that moving one issue will also automatically update the other issue dates.  I was researching Drupal Calendar options and found this - I think this could also make ChiliProject smoother and more efficient to operate.  All the best, Guy Saban
