Affected version:			
Description:	Hi, Is it possible to add radio buttons, in the custom query list, next to custom queries that will set a custom query to stay persistent. I find, when managing a number of projects, that when I am interested in a certain type of query on a number various projects that I always need to click back and select the query after viewing an issue. Is the custom query is persistent then the query becomes a kind-of window (or view) on a project for as long as I need it. When I no longer need to be viewing those queries then I can select a radio button for no query (which would need to be added). All the best, Guy
