ChiliProject - Bug # 924: bluefeather and rdiscount not in Gemfile, but they're required by rake db:migrate

Status:	Declined	**Priority:**	Normal
Author:	Andrey Mikhaylov	**Category:**	
Created:	2012-03-08	**Assignee:**	
Updated:	2012-03-09	**Due date:**	

Remote issue URL:	
Affected version:	3.0.0
Description:	I've been upgrading 2.2 to 3.0 using the upgrade manual.

When doing @bundle exec rake db:migrate RAILS_ENV=production@, i had the following errors (separately):

<pre>
no such file to load -- bluefeather
no such file to load -- rdiscount
</pre>

After adding those to @Gemfile@, the migration went all right.

- Target version deleted (3.1.0)

Ah... I should've set the affected version to 3.0. And now i can't find where to change it.

- Affected version set to 3.0.0

Hi Andrey, those are probably gems needed for a plugin, aren't they? I can't see them mentioned in the ChiliProject core…

2012-03-09 07:16 am - Andrey Mikhaylov

- Status changed from Open to Declined

You're right, Felix! Both of those gems are required by plugins i had installed.

Sorry for disturbance.

2012-03-09 07:18 am - Felix Schäfer

No problem. You can even add those to the plugins in a @Gemfile@ directly in the plugin's root directory, or add them locally to your ChiliProject in a @Gemfile.local@, this way you don't need to edit and won't have problems updating the stock @Gemfile@.
