

ChiliProject - Bug # 945: Skin does not load in Firefox 10

Status:	Closed	Priority:	Normal
Author:	Yehuda Katz	Category:	Themes
Created:	2012-03-22	Assignee:	
Updated:	2012-03-23	Due date:	
Remote issue URL:			
Affected version:	3.0.0		
Description:	My installation of ChiliProject as well as the ChiliProject site itself do not load properly in Firefox 10. The CSS is loaded, but the Javascript and images are not.

I can't reproduce that on FF 10.0.2/OSX. Everything loads just fine here.

Are you sure you haven't disabled images/JavaScript in your browser for testing? I would have at least expected your browser to try to load some data (and maybe fail).

Hi,

I had the same issue after upgrading from 2.x to 3.0 - because I forgot to run the "rake.." commands for db migration and plugin migration...

So: Did you run the rake commands mentioned in the upgrade docu?

ciao,

Chris

I was originally able to reproduce it on three computers. After I removed and reinstalled Firefox, they all started working properly. Sorry for the noise.
