ChiliProject - Bug # 953: LDAP is unavailable app crash

Status:	Open	**Priority:**	Normal
Author:	Robert Mitwicki	**Category:**	
Created:	2012-03-26	**Assignee:**	Robert Mitwicki
Updated:	2012-06-08	**Due date:**	

Remote issue URL:	
Affected version:	master
Description:	What steps will reproduce the problem?
	1. Setup LDAP authorization
	2. Turn down LDAP server
	3. Try login using account with LDAP authorization
	What is the expected output? What do you see instead?
	It should inform user about that authorization source is unavailable at the moment.
	But instead of that it just crash and give 500 to user.

I made some improvements in LDAP support, especial with test LDAP authorization.

But main thing is right now CP not crash when LDAP is offline and user will get info about that.

Hello Robert,

I had a look at your pull request and I have one major problem with it: the return value of methods should not be changed and errors shouldn't be passed as return values.

The "better" ruby way would be to define a new error class, throw that where the error occurs and catch it where you want to catch it. Have a look at source:/app/models/mail_handler.rb#L19 for an example (probably not a good one, but you should get the idea).

Hi,

You have right, I will fix that and give You know.

Thanks for review.
