Remote issue URL:	
Affected version:	
Description:	In the interest of letting the community's voice be heard, I suggest implementing voting on Feature Requests. Implementing this does not necessarily require you to do the highest voted things, but it lets the users' voice be heard and gives them a say in what is important to them.

I agree, this would be useful. I think there is a plugin for this already but I'd like to do a code review on it before we install it.

2011-01-22 01:26 pm - Muntek Singh

It's pretty old and probably won't work anymore, but here it is:

- Status set to Open

2011-02-02 06:50 pm - Alex Bevilacqua

These are the features of a voting system/extension that I would consider ideal:

* votes appear in the issue summary view
* votes can be used to sort the summary view
* voting should (by project) have the option of _requiring_ a comment to be left before a vote can be cast

2011-05-01 01:54 pm - Robert Pollak

+1 :)

BTW, I'd suggest Lauchpad's "Affects me, too" instead of a "vote" button.

2011-06-08 02:45 pm - Andy Fowler

I think voting is huge -- if I can recommend one other possible setting: *Allow users to vote multiple times*. The rationale for this is that we provide access to support agents, so that when they hear a customer feature request, they can vote the issue up. Obviously, for most community-driven projects, this feature wouldn't be desired. Thanks!

2012-01-21 03:08 am - Vladislav Poluhin

+1
Voting is really desired feature!

2012-02-07 08:20 pm - Simon Deziel

Voting support would indeed be great, especially for community projects. Thanks.
