**Affected version:**

**Description:**

Experimenting with the more recent rubies using rvm and passenger. We have reasonably large forums (>2000 messages) and searching them under 1.8.7 returns results, whereas ruby 1.9.3 returns:

```
<pre><code>
Processing SearchController#index (for 192.168.2.24 at 2012-04-23 19:36:51) [GET]
  Parameters: {"messages"=>"1", "q"=>"web", "controller"=>"search", "action"=>"index", "id"=>"exony-faq"}
Rendering template within layouts/base
Rendering search/index

ActionView::TemplateError ((<unknown>): could not find expected ':' while scanning a simple key at line 20
column 1) on line #33 of app/views/search/index.rhtml:
30:
31:   <dl id="search-results">
32:     <% @results.each do |e| %>
33:       <dt class="<%= e.event_type %%">
34:         <%= content_tag('span', h(e.project), :class => 'project') unless @project == e.project %>

```

and in 1.9.2 it returns:

```
<pre><code>

```

I am using the mysql2 gem on fedora 16. Any pointers ?

Sorry - this is chiliproject-3.1

These look like errors with the yaml parser, it's been changed in 1.9 and there's subtle incompatibilities with the 1.8 one. I can't fathom what's going on there though, I'll have to have a closer look.
